Understanding DNS Risks, Impact and Recommendations

The diagram illustrates the DNS hierarchy and associated risks. On the left, a vertical stack of colored arrows points to a central laptop icon, representing various threats: Cache poisoning, domain name system (DNS) spoofing, or man-in-the-middle attacks (yellow); Vital domain expires, DNS hijacking (red); Domain shadowing, Distributed denial of service (DDoS) attack on DNS (green); DDoS attack on other servers (grey); and Expired secure sockets layer (SSL) certificate (teal). The central diagram shows the flow from a laptop to an ISP (globe), which connects to Root DNS, Registry, Authoritative DNS, and Content Server. A Registrar is also shown connected to the Registry. Red lightning bolts indicate attacks on the Registry and Registrar, while a green lightning bolt indicates an attack on Authoritative DNS.
